Bell Nozzle Rocket Engine Calculations

Ben Calow

August 11, 2025

Contents

Nomenclature

C_f	Vacuum thrust coefficient
$\dot{m}$	Mass flow rate
M	Molar mass
Ma	Mach number
$mol\%$	Mole percentage
P	Pressure
R	Gas constant
T	Temperature
v	Velocity
ϵ	Nozzle area ratio
γ	Ratio of specific heats
ρ	Density

Subscripts

$_a$	Ambient
$_c$	Chamber
$_e$	Exit
$_s$	Stagnation
$_t$	Throat

Introduction

Documentation of calculations for a bell nozzle rocket engine

1 Propellant

1.1 Propellant Stoichiometry

2 Exhaust Gasses

2.1 Ratio of Specific Heats of Multi-Compound Gas Mixtures [1]

$$\frac{1}{\gamma - 1} = \sum \frac{mol\%}{\gamma_i - 1} \tag{2.1}$$

2.2 Stagnation Pressure of Exhaust Gasses [2]

$$P_s = P_1 \left(1 + \left(\frac{\gamma - 1}{2}\right) Ma_1^2\right)^{\frac{\gamma}{\gamma-1}} \tag{2.2}$$

2.3 Stagnation Temperature of Exhaust Gasses [3]

$$T_s = T_c \left(1 + \left(\frac{\gamma - 1}{2}\right) Ma_1^2\right) \tag{2.3}$$

3 Combustion Chamber Geometry

4 Throat Geometry

5 Nozzle Geometry
